OTIS · USER GUIDE

Administrator

Looking after OTIS: cases, people, settings and reporting

As an **Administrator** you look after OTIS as a whole. You bring cases in, keep people and their roles up to date, maintain the checklist and settings, oversee the work across both review teams, and produce reports and the Trail Light export.

Where you'll work

Mainly in the **OTIS management app**. Checkers, advisers and T&C Managers work in the **OTIS portal**. With the **Administrators** role you can read every case there too; **AL Portal - Portal Administrator** reads no cases in the portal.

Where you fit in

You oversee the whole journey, from bringing cases in to exporting closed results.

Dashed steps happen on some cases only: the Tax check where one is needed, the AQS check unless the Tax team returns the case to the paraplanner, the adviser when something needs putting right, and T&C sign-off only for Insufficient evidence, Potential harm or a failed Tax check.

What you can do

The management app is organised into the areas below. Each one is a page in the menu.

Area	What you do there
Dashboard	See work in progress and outcomes at a glance.
Case worklist	See every case with its details, checks, outcome and remediation. Editing case details and allocating checks are done by the OTIS Manager and the team managers under the default rules (see Good to know).
Case intake	Upload the Intelligent Office extract, see how many rows came in, and deal with any rows that failed the checks.
Management reporting	Report on outcomes, open and overdue remediation, ageing and sign-off. Filter the results and export them.
Exports	Produce the Trail Light file of closed cases, when you need it.
Question library	Maintain checklist sections and questions, and the **File Quality – Fail points** checkers tick. Questions and fail points are retired, never deleted, so past checks always read as they did.
Adviser mapping	Link each adviser to their T&C Manager. Sign-off depends on it.
Email Templates	Edit the emails OTIS sends, who receives each one, and see any that could not be sent.

Area	What you do there
Dropdown options	Maintain the choices offered in lists across OTIS.
Security configuration	Control which roles can reach which pages and actions.
People	Add people, and grant and withdraw roles. One person can hold more than one role.

Your regular tasks

How often	What to do
Daily	Upload the Intelligent Office extract and resolve any exceptions. Check for cases waiting too long for allocation and for overdue remediation.
When people join, move or leave	Update their roles on the **People** page and keep the **Adviser mapping** current.
As needed	Produce reports and the Trail Light export, and adjust email templates and dropdown lists.
When the checklist changes	Date questions in and out, and retire sections from a date, in the **Question library**. Adding or editing a section takes effect at once. Add, reword, reorder or retire fail points in its **File Quality – Fail points** block, below the sections. A retired fail point leaves every check in progress at once, even one that ticked it. Checks already submitted keep it.

The roles you manage

Roles are named here as **Security configuration** shows them, with the everyday name in brackets.

Role	What they do	Where
AL Portal - AQS Reviewer (AQS Checker)	Picks up and completes AQS checks.	Portal
AL Portal - Tax Reviewer (Tax Checker)	Completes Tax checks allocated to them.	Portal
AL Portal - AQS Team Manager	Edits case details and allocates their own team's AQS checks.	App
AL Portal - Tax Team Manager	Edits case details and allocates their own team's Tax checks.	App
AL Portal - Adviser Remediation (Adviser)	Records remediation on their own cases.	Portal
AL Portal - T&C Supervisor (T&C Manager)	Signs off remediation and records the final outcome.	Portal; the app too if it is shared with them
AL Portal - Planner (Paraplanner)	Receives emails with the completed checks. No sign-in.	Email

Role	What they do	Where
AL Portal - OTIS Manager	Runs the process: intake, case details, allocation of either type of check, reports and exports. Called AL Portal - Outcome Testing Manager in the test environments.	App and portal
AL Portal - Portal Administrator	Configuration and people: intake, reports, exports, the question library, adviser mapping, email templates, dropdown lists and security. Views cases and remediation; reads no cases in the portal.	App
Administrators	The same as AL Portal - Portal Administrator, and reads every case in the portal.	App and portal

Good to know

- Important changes – role grants, reallocations, status changes and sign-off decisions – are recorded with who made them and when, and the reason where one is given.
- A case at Closed or No Check Required can't move to another status, but its details can still be corrected. Correcting an outcome is a controlled step that needs a reason, and the original outcome is always kept.
- Under the default rules the administrator roles view cases but don't edit case details, allocate checks or open Tax and AQS checks. You can change what each role can do on **Security configuration**, but allocation also follows the role: only AL Portal - OTIS Manager, Administrators and the team managers (for their own team) can allocate, and AL Portal - Portal Administrator never can.
- A check can only be allocated to someone who holds the matching checker role: AL Portal - Tax Reviewer or AL Portal - AQS Reviewer.
- A role decides what a person can see. Grant only what someone needs for their job.
- Check the Trail Light file before it is sent on.

Need help?

For anything you can't resolve from the management app, contact the OTIS system owner with the case reference or page name, and a short description of what you were trying to do.
