Administrator

Looking after OTIS: cases, people, settings and reporting

As an **Administrator** you look after OTIS as a whole. You bring cases in, keep people and their roles up to date, maintain the checklist and settings, oversee the work across both review teams, and produce reports and the Trail Light export.

> **Where you'll work**
> Mainly in the **OTIS management app**. You can also see every case in the **OTIS portal**, which is where checkers, advisers and T&C Managers do their work.

Where you fit in

You oversee the whole journey, from bringing cases in to exporting closed results.

What you can do

The management app is organised into the areas below. Each one is a page in the menu.

Area	What you do there
Dashboard	See work in progress and outcomes at a glance.
Case worklist	See every case, update case details and status, and allocate or reallocate Tax and AQS checks. Work already done is kept when a case is reallocated.
Case intake	Upload the Intelligent Office extract, see how many rows came in, and deal with any rows that failed the checks.
Management reporting	Report on outcomes, open and overdue remediation, ageing and sign-off. Filter the results and export them.
Exports	Produce the Trail Light file of closed cases, when you need it.
Question library	Maintain checklist sections and questions, and the **File Quality – Fail points** checkers tick. Questions and fail points are retired, never deleted, so past checks always read as they did.
Adviser mapping	Link each adviser to their T&C Manager. Sign-off depends on it.
Email Templates	Edit the emails OTIS sends, who receives each one, and see any that could not be sent.
Dropdown options	Maintain the choices offered in lists across OTIS.
Security configuration	Control which roles can reach which pages and actions.
People	Grant and withdraw roles. One person can hold more than one role.

Your regular tasks

How often	What to do
Daily	Upload the Intelligent Office extract and resolve any exceptions. Check for cases waiting too long for allocation and for overdue remediation.
When people join, move or leave	Update their roles on the **People** page and keep the **Adviser mapping** current.
As needed	Reallocate cases, correct case details, produce reports and the Trail Light export.
When the checklist changes	Date questions or sections in and out in the **Question library**. Add, reword, reorder or retire fail points in its **File Quality – Fail points** block, below the sections. A retired fail point leaves every check in progress at once, even one that ticked it. Checks already submitted keep it.

The roles you manage

Role	What they do	Where
AQS Checker	Picks up and completes AQS checks.	Portal
Tax Checker	Completes Tax checks allocated to them.	Portal
AQS Team Manager	Allocates AQS checks and watches the team's workload.	App
Tax Team Manager	Allocates Tax checks and watches the team's workload.	App
Adviser	Records remediation on their own cases.	Portal
T&C Manager	Signs off remediation and records the final outcome.	Portal
Paraplanner	Receives emails with the completed checks. No sign-in.	Email
OTIS Manager	Oversees all cases and can allocate either type of check.	App
Administrator	Everything on this page.	App and portal

Good to know

- Important changes – role grants, reallocations, status changes and sign-off decisions – are recorded with who made them, when and why.
- A closed case can't be edited. Correcting an outcome is a controlled step that needs a reason, and the original outcome is always kept.
- A role decides what a person can see. Grant only what someone needs for their job.
- Tax and AQS Team Managers can only allocate checks for their own team, and only to people who hold the matching checker role.
- Check the Trail Light file before it is sent on.

Need help?

For anything you can't resolve from the management app, contact the OTIS system owner with the case reference or page name, and a short description of what you were trying to do.
